

### **Jurblami®**

Simplified and high-quality sealing operations with innovative application nozzles

#### **Advantages:**

- + Up to 50% time saving for rivet sealing
- + Excellent sealing quality
- + High reproducibility
- + Less cleaning effort
- + Better appearance

#### **Applications:**

Sealing of

- + nuts
- + rivets
- + drilling holes
- + fillets

The Jurblami® nozzles are designed for the simplified application of sealants, such as Chemetall's Naftoseal® product range. The specially shaped sealant application nozzles enable manufacturers to increase speed and quality of rivet, nut, drilling hole and fillet sealing. The nozzles encapsulate the rivets or nuts and thus provide first-class corrosion protection, for instance, when they are exposed to water, corrosive oils or sudden temperature changes. The nozzles can be used for all applications in the automotive, marine, rail and aerospace industries.

Chemetall is the exclusive global distributor for the Jurblami® products.

Applied with Jurlblami® nozzle

Manually applied

Jurlblami® nozzles enable a fast, high-quality and clean sealant application (top) compared to manual application (below).

Jurlblami® nozzles are available in different sizes.
